MICROSCOPES

FOR THE *MODERN* LABORATORY

***There's over a Century's Experience behind* SPENCER LABORATORY MICROSCOPES**

All the knowledge and experience of over a hundred years has gone into developing the latest Spencer Laboratory Microscopes. For students, technicians, laboratory and research workers, they offer the latest in design and convenience. Spencer Microscopes are world-famous. They incorporate time-tested features, in addition to many new refinements. All of these new microscopes have been subjected to exhaustive tests on pilot models—many, for over five years prior to their introduction. Aluminum, used in construction of the arm and body, reduces weight by 1/3—a definite boon to those who must carry microscopes from one

place to another. The microscope stands have been tested and found to be stronger than and twice as rigid as previous models. The inclination joint, after two million reciprocating motions, has shown no measurable wear. The redesigned micrometer-screw fine adjustment now has ball-bearing slide-ways. It is responsive to the lightest touch. Under test it showed less than .2 micron backlash after three million revolutions—an estimated normal 20 years' wear. The latest Spencer Laboratory Microscopes are ready to serve you and to carry on the tradition established by earlier models—dependability, long wear, customer satisfaction.

***An Important Instrument—* THE LABORATORY MICROSCOPE**

Most problems can be solved if they can be clearly seen and understood. Since the unaided human eye has limitations, microscopes are of vital importance in extending the range of vision to extremely fine details. They are used extensively in school and hospital laboratories for study and examination of biological and bacteriological specimens and tissue sections. In industry they are employed in observing the condition of raw and processed materials, the quality of finished

products, the effects of use and wear, and in analyses by optical methods. Minute particles or scratches may be counted and measured with eyepiece reticles, microscope fields of view calibrated for specific counting requirements, precision manufacturing operations observed. Industry needs and uses the laboratory microscope to cut production costs and to maintain quality. The microscope is indispensable to public health laboratories in maintaining health standards.

Here is a Spencer N15MLH Microscope in use in a laboratory. Notice how the compact substage light source leaves the table top free for necessary experimental materials. Note also the convenient size and position of the various focusing control knobs. The microtome at the extreme right is a Spencer 820 Precision Rotary Microtome which feeds specimens as thin as 1 micron.

ADJUSTABLE TENSION ON FOCUSING CONTROL KNOBS

Tension on the substage and coarse adjustment control knobs may be set to suit the individual touch. With left-hand knob held firmly, a counterclockwise turn of the opposing knob loosens tension; clockwise turn tightens, even to acting as a lock. This adjustment can also be used to compensate for normal wear that may occur over a period of years.

MICROMETER-SCREW TYPE FINE ADJUSTMENT

Ball-bearing slideways reduce friction, facilitate focusing. Increased bearing surface of micrometer screw, with several threads always fully engaged, decreases wear. Spring loading eliminates backlash and reduces possibility of breaking cover glasses. Constant ratio lever insures accuracy of 2 micron scale through entire range of travel.

Many Advanced Features of

IMPROVED LOCATION OF FINE ADJUSTMENT CONTROLS

Dual control knobs, located low enough on the arm to be convenient to mechanical stage and substage controls, permit use of either hand in making adjustments. Sufficiently separated from the coarse adjustment knobs for ample finger clearance, they also facilitate reading of the scale, calibrated in divisions of 2 microns, on the right-hand knob.

POSITIVE CENTERING OF OBJECTIVES

A sturdy ball-and-groove spring stop on the dustproof, dust-shedding nosepiece accurately and positively centers all objectives. Spencer patented dual-cone construction doubles the bearing surface, lengthens the life and stability of the nosepiece, and assures parfocality and correct alignment of objectives with other elements of the optical system.

NEW 10X DIVISIBLE OBJECTIVE WITH N.A. OF .25

A completely redesigned objective providing a clear, crisp image from edge to edge of field, with improved color correction and working distance increased to 6.8mm. Tapered end allows better oblique top lighting of specimen. This objective is divisible to provide 4.2X magnification with an N.A. of .10, and a working distance of 25mm.

NEW MECHANICAL STAGE WITH "PINCH GRIP" ACTION

Patented "Pinch grip" action of slide holder permits rapid insertion of slides without danger of disturbing mechanical stage settings. New built-on mechanical stage is available, either graduated for recording and relocating of selected fields in the specimen, or ungraduated. Control buttons are conveniently located, adjacent to other microscope adjustments.

IMPROVED OPTICAL ALIGNMENT OF SUBSTAGE

New and larger fork-type mount facilitates easy removal of condenser for cleaning. Locking and keying devices in fork and condenser mounts prevent rotation of condenser and assure positive positioning for correct optical alignment, no matter how often it is removed. Dual rack-and-pinion adjustment knobs are convenient to both hands.

SPENCER MICROSCOPES

DURABLE, LONG-WEARING INCLINATION JOINT

This patented axle showed no measurable wear after two million reciprocating motions. Bearings automatically compensate for wear and uniform friction is maintained throughout the arc of movement. Friction is adjustable by turning small screws in base pillars. Removal of a stop screw in the right pillar allows the microscope to incline to horizontal.

RAPID INTERCHANGEABILITY OF BODY TUBES

Interchangeability of body tubes permits users to convert from monocular body to binocular body and vice versa. It is easily and conveniently accomplished. This interchangeability is desirable for those who are interested in both photomicrography and prolonged microscopical examinations. This feature is available on the microscopes of series 15 only.

CONVENIENTLY ATTACHABLE SUBSTAGE ILLUMINATOR

Convenient, permanently adjusted full-field illumination is provided for all objectives from low power "finder" to oil immersion, without refocusing condenser. Securely fastened to the condenser with bayonet fitting, Microscope Illuminator No. 700 eliminates adjusting mirror or lamp. It remains in optical alignment when the microscope is inclined.

SPENCER

MICROSCOPES FOR

Cat. No.

Series 78 & 79

For simple, routine examinations where condenser and oil immersion objectives are unnecessary, Nos. 78 and 79 Microscopes, equipped with standard Spencer optics, enable the technician or student to work rapidly and comfortably. The built-in light source provides dependable, unvarying illumination through 5-aperture disc diaphragm. The combination coarse-fine adjustment facilitates rapid focusing. Reversed arm and nosepiece, together with low position of focusing knobs, give clear view of stage and allow forearms to rest on table. Without cabinet.

Focusing control has adjustable tension to suit individual preference. Spring loading of gear train reduces cover glass breakage.

Positioned close to the specimen, the 7-watt bulb provides a wide angle of cool illumination for better optical performance.

Series 66

The No. 66 Microscopes are suitable for simple, routine examinations, especially where electrical outlets are unavailable, since it utilizes an outside light source which is focused on the specimen by means of a mirror. Used in the conventional position, it has the standard Spencer rack-and-pinion coarse and micrometer-screw type fine adjustments and a five-aperture disc diaphragm, shown in insert. Cabinet included.

SPENCER

MICROSCOPES FOR

Series 65

The No. 65 Microscopes are especially suitable for school or college laboratories where versatility and flexibility are desired at small cost. Incorporating all the new Spencer mechanical features, they render satisfactory service where neither condenser nor oil immersion objectives are needed. It is, however, possible at some future date to add condensers. This increases their usefulness. They are supplied with either mirror or attached illuminator. Cabinet included.

The flexibility of an Iris Diaphragm permits precise aperture control of light reaching specimen.

Condenser with Iris Diaphragm is focusable in sleeve-type slotted mount. No. 700 Lamp can be attached.

Series 75

Especially valuable where inexperienced students might otherwise fail to secure maximum use of the condenser, the No. 75 Microscopes allow the instructor to lock the condenser in the desired position. The N.A. 0.66 condenser illuminates dry objectives adequately, while the N.A. 1.25 condenser allows the use of oil immersion objectives. All the new Spencer features are incorporated on these microscopes. Cabinet included.

MICROSCOPES FOR

Series 35

For adaptability, convenience, and range of magnification, No. 35 Microscopes are especially recommended for use in medical, industrial, public health, and university laboratories. Rack-and-pinion focusing, fork-mounted condensers are convenient for rapid focusing and removal for cleaning or interchanging. Most models are equipped with mechanical stages and the standard optics required by medical schools. They are supplied with attached illuminators or mirrors for using outside light sources. Cabinet included.

No. N35MHA
Microscope with
quadruple nose-
pieces and 700 At-
tached Microscope
Illuminator.

No. 35MH Mi-
croscope with triple
nosepiece, fork-
type substage, and
plano-concave mir-
ror.

The Abbe N.A. 1.25 Condenser, without special readjustment, provides full-field illumination for objectives from the high power 97X oil immersion to the 5X and 3.7X low power "finder" objectives. It is furnished with all Spencer laboratory microscopes equipped with an achromatic oil immersion objective.

N35MHA	Monocular	Quadruple	5X, 10X, 43X 97X oil imm.	5X and 10X	Built-on Mechanical	N.A. 1.25	Attached 700 Illuminator	320.00	

Add C just before the figures of the catalog number (as C15MLH, NC15MLH) to indicate Americoted optics. Prices for uncoated and Americoted models appear in right-hand columns.
Cabinets supplied with all microscopes. If not desired, deduct \$15.00. If carrying case is preferred, add \$5.00 to prices listed.

SPENCER

MICROSCOPES FOR

Series 15

For prolonged periods of microscopical examination, No. 15 Microscopes offer the ultimate in comfort and convenience. The binocular body with eyetubes inclined 30° from vertical, allows comfortable posture, reducing muscular fatigue. Eyetubes, converging at the normal angle for close work, reduce eyestrain and are adjustable for interpupillary distance and differences in eye refraction. Monocular models are convertible to binocular at any time. Graduated or ungraduated, built-on or attachable mechanical stages are optional. Cabinet included.

No. 15MAH Microscope with monocular body, ungraduated built-on mechanical stage, and plano-concave mirror

No. N15MLH Microscope with inclined binocular body and No. 700 Microscope Illuminator

Binocular bodies with parallel eyetubes are available for those who prefer them. When ordering give number of equivalent model with inclined eyetubes, but specify "with parallel tubes"

No. 385 BAKELITE SUBSTAGE LAMP

Compact, adaptable to vertical or horizontal use—Sturdy, reagent-proof, practically indestructible—Standard 10-watt bulb.

385A With blue glass.	\$4.00
385B With Corning Daylite Glass.	4.90
386 Bulb, 10-watts.	
.....MCP	.25
388 Bulb, 15-watts.	
.....MCP	.35

No. 353 UNIVERSAL MICROSCOPE LAMP

For transmitted or reflected light—Useful above or below stage—Mounted on 3-link jack-knife stand—Focusable from image of filament to diffused beam—With intensity control from 4.5 to 7.5 volts—With transformer. \$49.00

360 Bulb MCP	.70
------------------------	-----

Micrometer Eyepiece Fixed Scale

NO. 415

6X magnification, 5-mm scale divided into 50 parts \$15.00

NO. 420

10X magnification, 5mm scale divided into 100 parts. . . . \$15.00

SPENCER MICROSCOPE LAMPS AND ACCESSORIES

No. 735 MICROSCOPE ILLUMINATOR

For binocular microscopes, phase or dark field microscopy, photomicrography and microprojection—All adjustments externally located for convenience—Special double lamp house for cool operation—Iris diaphragm—100-watt bulb, 8' cord.

735A With simple filter holder and blue and ground glasses	\$60.00
735B With simple filter holder and Corning Daylite Glass.	63.00
735C With multiple filter holder and blue and ground glasses.	65.00
3403 Bulb MCP	.70

No. 370 ADJUSTABLE LABORATORY LAMP

For general microscopical or dark field work—Focusable, with size of field controlled by iris diaphragm—Adjustable as to angle and height—100-watt bulb.

370A With blue and ground glasses	\$47.00
370B With Corning Daylite Glass	50.00
3403 Bulb MCP	.90

No. 700 ATTACHABLE ILLUMINATOR

Convenient, permanently adjusted illumination for all objectives—Attachable to condenser \$11.80

380 Bulb	1.40
--------------------	------

No. 361 CHALET MICROSCOPE LAMP

Inexpensive—To illuminate binocular microscopes—Visor shades eyes—Standard 60-watt bulb.

364 Bulb MCP	.11
------------------------	-----

SPENCER MEASURING AND COUNTING RETICULES—21.15mm diameter

NO. 405

5mm scale divided into 50 parts.....
\$5.00

NO. 422

5mm square ruled into 0.5mm squares, each mm line numbered on 2 adjacent sides..... \$9.00

NO. 416

Each quarter of 7mm square divided into 25; one again into 25..... \$10.00

NO. 427

Cross hairs.. \$6.00

SPENCER STAGE MICROMETER

NO. 400. Standard 1" x 3" slide with 2mm scale divided into 200 parts..... \$16.00

NO. 425 SCREW MICROMETER EYEPIECE

Scale of 30 divisions, every fifth line of double length and numbered—Each interval in scale exactly equivalent to one revolution of drum graduated into 100 parts—Does not require traversing of index over entire object—Fraction of rotation is sufficient—10X magnification..... \$77.00

MICROSCOPE BODY TUBES

Useful in industry for attaching to machinery—Have rack-and-pinion coarse adjustment—Accommodate standard optics.

71 With adjustable graduated draw tube. \$33.00

81 With fixed draw tube..... 28.00

SPENCER DARK FIELD CONDENSER

Spencer Dark Field Condenser No. 214 is useful in examining the living *Trepalomus pallidum*, body fluids, colloidal suspensions, dispersibility of additives, and shape and size of sludge particles. Specimens which cannot be readily observed with bright field, are illuminated so that particles and organisms become self-luminous for easy observation against a dark background. No. 214 fits the fork-type substage mount of the latest Spencer microscopes, is interchangeable with bright field condensers, and has a centerable mount and funnel stop for oil immersion objective..... \$50.00

MIRROR AND FORK

192 Plano-concave mirror for microscopes of series 15, 35, 65, 75.. \$6.00

193 Fork mount to adapt mirror to microscopes of series 15 and 35. .80

194 Fork mount to adapt mirror to microscopes of series 65 and 75. 1.80

ATTACHABLE MECHANICAL STAGES

NO. 1584

Spencer Ungraduated Attachable Mechanical Stage with "pinch grip" action. Conveniently located buttons actuate rack-and-pinion movements in both directions. Will permit exploration of 25 x 75mm slides. In case..... \$46.00

NO. 1585

Spencer Graduated Attachable Mechanical Stage with "pinch grip" action. Conveniently located buttons actuate rack-and-pinion movements in both directions. Will permit exploration of 50 x 75mm slides. In case..... \$60.00
